PROFESSIONAL SUMMARY

- Software Engineering student pursuing a Bachelor of Technology (B.Tech) in Engineering Science at the Indian Institute of Technology, Jodhpur, with a strong foundation in Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), and Full-Stack Web Development. Proficient in C++, Java, Python, and JavaScript/React.js, with hands-on experience architecting and shipping real-time, multi-user web applications using RESTful APIs, WebSockets, SQL databases, and cloud platforms. Solved 700+ problems across competitive programming platforms including LeetCode, Codeforces, CodeChef, and GeeksforGeeks. Seeking Software Development Engineer (SDE) / Full-Stack Developer roles to apply and expand expertise in backend development, database management, system design, and scalable software application development.

CORE COMPETENCIES

- Data Structures and Algorithms (DSA) • Object-Oriented Programming (OOP) • Full-Stack Web Development • RESTful API Design and Development • SQL and Relational Database Management • Version Control (Git and GitHub) • Problem Solving and Debugging • Cloud Deployment and Hosting • Software Development Life Cycle (SDLC)

EDUCATION

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech. (ES)	Indian Institute of Technology, Jodhpur	7.66	2026-Present
Senior Secondary (Science - PCM)	Maharashtra Board	90.66%	2024
Secondary	Maharashtra Board	95.60%	2022

TECHNICAL SKILLS

- Programming Languages:** C, C++, Java, Python, JavaScript, SQL
- Web Development:** React.js, Node.js, Express.js, HTML5, CSS3, RESTful API Development, WebSockets
- Databases:** MySQL, Database Design and Management
- Artificial Intelligence / Machine Learning:** Google Gemini API, AI-Assisted Data Analysis
- Tools and Platforms:** Git, GitHub, Vite, Vercel, Render, Aiven, Visual Studio Code, Linux, Windows
- Libraries and Frameworks:** NumPy, Axios, Cheerio, Raylib

PROJECTS

- ProofTrack – AI-Assisted Claim Verification Platform** Live Demo
 - Developed a full-stack AI-assisted claim verification platform using React.js, Node.js, Express.js, Sequelize, and MySQL, enabling users to create claims, add web sources, extract evidence, and evaluate claim-evidence relationships.
 - Engineered a hybrid verification pipeline combining deterministic rule-based analysis with the Google Gemini AI API to classify evidence as supporting, contradicting, or insufficient, with confidence scores and reasoning.
 - Secured the platform against Server-Side Request Forgery (SSRF) by validating and restricting localhost, private-network, and internal IP requests during webpage extraction, and deployed the production system using Vercel, Render, and Aiven.
 - Designed a normalized relational database schema in MySQL using Sequelize ORM to model claims, sources, evidence, and verification results with referential integrity, and built RESTful API endpoints supporting claim creation, source ingestion, and evidence evaluation.
 - Built a component-based React.js frontend allowing users to track claim status, review linked evidence, and view AI-generated verdicts with confidence scores and reasoning in real time.
- FoodLoop – Surplus Food Redistribution Platform** Live Demo
 - Built a full-stack surplus food redistribution platform using React.js, Node.js, Express.js, and MySQL, connecting hotels, charities, and volunteers through structured donation and delivery workflows.

- Designed role-based access workflows for food donations, charity requests, volunteer coordination, user authentication, and automated notifications, and deployed the application using Vercel, Render, and Aiven.
- Modeled a relational database schema in MySQL to track donation listings, claim requests, and delivery status across hotel, charity, and volunteer user roles.
- Implemented secure authentication and RESTful API endpoints in Express.js to handle role-specific actions and data access across the donation lifecycle.

- **CampusConnect – Academic Collaboration Platform**

Live Demo

- Created a multi-user academic collaboration platform using React.js, Node.js, and RESTful APIs, enabling students to organize, upload, and access assignments by academic year, branch, and subject.
- Architected real-time, subject-wise discussion channels using Socket.IO, enabling live student communication and instant doubt resolution without page refreshes.
- Structured RESTful API endpoints and a relational data model to organize assignments and discussions by academic year, branch, and subject, supporting efficient content retrieval.
- Built a React.js interface for uploading, browsing, and filtering academic resources, improving content discoverability for students across multiple subjects.

KEY COURSES TAKEN

- Data Structures and Algorithms, Object-Oriented Programming, Introduction to Computer Science, Machine Learning, Operating Systems

ACHIEVEMENTS

- Solved 700+ algorithmic and data structure problems across LeetCode, Codeforces, CodeChef, and GeeksforGeeks, building strong proficiency in arrays, trees, graphs, and dynamic programming.
- Earned Grade A in Data Structures and Algorithms (DSA), demonstrating strong command of core computer science fundamentals.
- Earned Grade A- in Introduction to C Programming.
- Maintained a consistent daily coding practice routine, steadily strengthening problem-solving and algorithmic thinking skills.

CODING PROFILES

- | | |
|--|--|
| • LeetCode: Abhishek__12__89__ | • CodeChef: kine_coast_64 |
| • Codeforces: abhisheksnparote6 | • GeeksforGeeks: abhisheksoe0gv |
